EDUCATION

Purdue University - B.S. Aeronautical & Astronautical Engineering, Honors

Expected Graduation: May 2028

GPA: 3.82/4.00

Activities: Purdue Aerial Robotics Team, Teaching Assistant, Purdue All-American Marching Band

WORK EXPERIENCE

Engineering Intern - Xchanger

Hopkins, MN | May - Aug 2026

- Diagnosed and troubleshot a production model error causing predicted pressure-drop to underestimate actual values by 2-3x, preventing inaccurate data sheets from reaching clients.
- Tested pressure-drop and velocity performance across 18 air-to-air heat exchanger units (100% of models) and multiple flow configurations, generating an empirical dataset to recalibrate the company's C-based modeling tool.
- Derived unit-specific correction factors now built into the production model, giving engineers more accurate datasheets and a validated safety margin when quoting new units.

Teaching Assistant - Honors Intro to Engineering (ENGR 16X)

West Lafayette, IN | Aug 2025 - Present

- Support first-year students with coursework, including 6 design projects covering production plant efficiency modeling in Python, physics simulation in MATLAB, and robot design using Raspberry Pi embedded systems.

Intern - Seminar for Top Engineering Prospects (STEP)

West Lafayette, IN | Jun - Aug 2025

- Developed and delivered a modular Arduino programming curriculum to 320 prospective engineers, creating reusable functions and tutorials to teach fundamental microcontroller programming concepts.

Teaching Assistant - Intro to C Programming

West Lafayette, IN | Jan - May 2025

- Led 30+ students across 12 labs covering core C concepts, held office hours, and graded coding assignments.

TECHNICAL PROJECTS

R&D Airframe Member - Purdue Aerial Robotics Team (PART)

Sep 2025 - Present

- Designed 9 wing structure and tail assembly components for a team eVTOL aircraft in SolidWorks, incorporating tolerance and fit considerations for a modular, ease-of-assembly build.
- Performed structural/stress analysis in MATLAB to evaluate rib spacing trade-offs between panel buckling and structural weight margins, informing airframe design decisions.
- Developed CAM toolpaths for CNC machining of 2 precision carbon-fiber layup molds for wings within a 2-hour manufacturing constraint using Fusion 360.
- Fabricated 2 composite wing assemblies using carbon fiber layup over laser-cut internal structures.

UAV Inertial Navigation System

June - July 2026

- Built an INS using an ESP32 for real-time IMU, magnetometer, and GPS acquisition. In Python, implemented complementary filter attitude estimation and linear Kalman filtering for position/velocity estimation at 40 Hz.
- Reduced position RMSE from 13 m to 4.9 m (62%) by diagnosing filter lag during high-acceleration maneuvers and tuning Kalman process/measurement noise covariances.
- Validated estimator performance with post-flight replay against ArduPilot EKF output, analyzing estimation accuracy during flight.

Fixed-Wing Surveillance UAV - Design, Analysis & Fabrication

Mar - June 2026

- Designed and fabricated a 1.3 m, 1.8 kg fixed-wing UAV with Raspberry Pi camera integration. Selected airfoils in XFOIL, sized aircraft weight and geometry for 25 m/s cruise, and modeled the full assembly in SolidWorks.
- Designed wing structure for a 6-g limit load factor, used FEA to confirm calculations & structural integrity with a maximum tip deflection of 12.1 mm. Fabricated using carbon-fiber skin layups over 3D-printed ribs and spars.
- Performed aerodynamic, stability, and flight dynamics analysis in XFLR5, iterating on CG, tail moment arm, and wing geometry to achieve a 6.67% static margin.
- Implemented ArduPilot flight controller for fly-by-wire and data logging. Completed maiden flight capturing airspeed, load factor, battery performance, and estimated position across a 150-second flight, validating the ~25 m/s cruise speed and maximum 3-g load against design predictions.

SKILLS

Programming: MATLAB/Simulink, Python, C, C++, Java, Git

CAD / Analysis: SolidWorks (CAD/FEA), Fusion 360 (CAD/CAM), NX, Teamcenter, XFLR5, XFOIL

Fabrication: Carbon-fiber composite layup, 3D printing (FDM), CNC milling

Leadership: Eagle Scout, Assistant Snare Segment Leader (Purdue AAMB)
